

Project Plan

Idea:

My idea is to create something that I can personally use myself, which is why I decided to create an 'Assignment Tracker'. This can help students stay on top of their assignments.

Layout:

There is a section to add a Subject, the Assignment Name, the Description of the Assignment, the weight of the Assignment, as well as the Due Date.

The description can help students prepare for what topics they will need to study to prepare for the assignment.

The weight can encourage students to plan out how much the assignments will be worth.

The due date can help students stay on top of their assignments and not forget about completing it.

Home Page:

The home page includes a brief description of what the website is about. I also included a button to easily navigate to add an assignment quickly.

Assignments Page:

In the assignment page, you can add a assignment, as well as view all the assignments you have already inserted into the table.

Table Design:

The table includes all of the assignments the student has inserted, as well as a edit button and a delete button.

The edit button allows the student to edit the assignment if they had made a mistake, or if there were any changes made to the assignment, such as the due date or weight.

The delete button will allow the user to delete an assignment if it is complete, or if the students just doesn't want it on the table anymore. When pressing the delete button, it will ask you 'are

you sure you want to delete this?' to ensure that there was no accident in pressing the delete button.
